BRINGS NATURAL LIGHT INDOORS

Central Industries' Ultra-Brite Fluorescents Lamps are specifically engineered and designed for maximum brightness and efficiency. You may agree that seeing is believing, so let's compare. Older technology fluorescent lamps distort colors and have a dingy appearance. Over time that will yellow the fixture lens, causing glare, eye strain and headaches, making things hard to read, reducing productivity, and resulting in wasted energy. With Central Industries' Ultra-Brite fluorescent lamps, you consistently receive a bright crisp white light. Central Industries' Ultra-Brites provide at least a 69% brighter whiter light, versus standard lamps. The whiter light whitens fixture lenses and reduces eyestrain, making things easier to see, and increases productivity. Central Industries' Ultra-Brite lamps will give you twice the the light output for your hard earned energy dollars.
